EDUCATION

Academlo School of Technology and Computer

Front-End Web Development Program

Autumn 2022 - Present

MAIN PROJECTS

E-commerce

January 2023

A fictional ecommerce store application.

- Uses a shopping cart system for users to add products to their purchase and perform the online payment process.
- Login and user profile system for customers to view previous purchases and access their shipping details.
- Product recommendation system based on the user's purchase activity.

Pokedex

December 2022

Web application to access information on all Pokemon.

- Allows users to access information on the different Pokemon from the popular video game and anime series.
- Uses a Pokemon API to obtain accurate and up-to-date information on the different Pokemon.
- Includes a search function to search for specific Pokemon, as well as a details section to view information such as abilities, statistics, and evolutions.

Crud Users

December 2022

Web application with CRUD (Create, Read, Update, Delete) functionality for users.

- Allows administrators to create, read, update, and delete user accounts from the database.
- Includes an easy-to-use interface for adding, editing, and deleting users.

Rick And Morty Dimension

November 2022

Web application that accesses the characters from Rick And Morty.

- Allows users to access the characters and universes from the popular television series "Rick and Morty" using the official series API.
- The application has an easy-to-use interface that allows users to search for specific characters.
- View details about them, including information on episodes and seasons they appear in.

Wheater App

November 2022

Web application to access weather forecasts.

- This application allows users to view the current and future weather forecast in their current location detected by the device or search for a specific city anywhere in the world. Use a weather forecast API to obtain accurate and up-to-date weather information.
